Good Evening Ms. Shiryagina

With this email I would like to make some important comments about your Project 2 on the application entitled *Academy of the handsome men and beautiful woman(BEA)*

First of all I would like to write clearly what I have already orally mentioned about the expected result of your project:

- The report must be carefully written:
 - clear sentences
 - grammatically correct
 - punctuation also correct
 - Sources should be clearly given
- ✓ If you are using LaTeX for your work, please make sure that you can search for texts in the resulting PDF file. See <https://texfaq.org/FAQ-cpy-srchpdf>
- A clear structure of the work is important
 - ✓ ◦ Use of BFH template (Latex or Word) (or similar) for the report and slides
 - ✓ ◦ Abstract: describes clearly and shortly the purpose of the work and which main objectives are achieved
 - Introduction: Introduction to the subject and the problem
 - ✓ Description of the software methodology
 - ✓ Description of the developments steps:
 - Analysis
 - ✓ ■ Functionalities (user stories, use cases)
 - ✓ ■ Domain model
 - Architecture of the application
 - Design
 - ✓ ■ System sequence diagrams
 - ✓ ■ Sequence diagrams
 - Design class diagrams
 - ✓ ■ Implementation
 - Testing
 - ✓ Description of the used technologies (not only a simple list)
 - ✓ List of all tools used (version, where we can get them) and a description of the deployment procedure. It should be possible and easy to compile and execute your program code with such a description.
 - Conclusion: discussion of the objectives achieved and not achieved. Since Project 2 is a preparation of the Bachelor Thesis, a discussion of the future objectives is expected.

The project started week 38, we are now week 49 and we meet almost every week (9 or 10 time on 12 weeks). I often told you that several important parts of the report are still missing, for example the Vision of the project is not totally finished, there is no user stories. The architecture of the application is missing as well as the design part. The presentation of the implementation is also missing as well as the testing part. Concerning the implementation you presented one functionality which is the Login/Registration but the User interface was not completed. The implementation of other functionalities is expected.

I think it is my role to tell you that I see some risks of failure for your Project2 because time flies and there are a lot of things that are still missing in the documentation and the implementation. It remains 5 weeks + 2 weeks for the Christmas break.

I am not saying that it is impossible to improve dramatically the report and the implementation (do not get me wrong) but I want to warn you as I did orally during our last meetings.

Best regards

--
